Summary

Senior Product Designer with 8+ years of experience designing complex enterprise and SaaS products for web and mobile. Skilled at simplifying complex workflows, designing data-heavy interfaces, building design systems, and improving products in risk-sensitive environments.

I take projects from early problem definition through user flows, interaction design, prototyping, delivery, and iteration. I work closely with Product and Engineering teams to make thoughtful design decisions that balance user needs, business goals, technical constraints, and timelines.

I also lead design systems, mentor designers, and improve design processes across teams. I use AI tools to make the design process more efficient, including exploring ideas, organizing research, improving workflows, and reviewing design outputs.

Core Expertise

- **Product Design & Strategy:** End-to-End Product Design | Complex Workflow Design | Problem Framing & Ambiguous Problem Solving | Product Strategy & Business Outcome Alignment
- **Design Leadership & Collaboration:** Cross-Functional Facilitation | Stakeholder Alignment | Product & Engineering Partnership | Design Critique & Mentoring | Craft Standards & Design Quality
- **UX & Interaction Design:** User Research & Usability Testing | Journey Mapping | User Flows & Information Architecture | Interaction Design | Data-Dense Interfaces & Dashboards | Complex Workflow Simplification
- **Design Systems & Scalability:** Design Systems & Design Standards | Scalable UI Architecture | Reusable Patterns & Components | Cross-Product Consistency | Design Process Improvement
- **AI-Assisted Design:**AI-Assisted Product Design | AI-Powered Ideation & Workflow Optimization | AI-Assisted Design Review | Human-in-the-Loop Quality Control | AI Output Evaluation
- **Risk & Inclusive UX:** Risk, Fraud, Identity & Compliance-Aware Design | Risk-Aware Design Framing | Accessibility (WCAG) | Content Clarity & Edge-State Design | Responsive & Cross-Platform Experience
- **Tools:** Figma | Make | Claude | Codex | Google AI Studio | MCP | Logrocket

Educations

- Bachelor's Degree in Software Engineering – Infoworld School
- Bachelor's Degree in Multimedia & Web Development – Asia E University
- Google UX Design Certificate – Google / Coursera
- UX Research & Design System Focus – Youix Education
- Web & Graphic Design – University of Science

Key Certifications

- Transformation Coaching - VCI International
- Google UX Design - Coursera
- Professional Scrum Master™ I (PSM I) – Scrum.org
- UX Research – Youix Design
- UI Global Style & UX Component – Youix Design
- Public Speaking & Presentation Skills – MDT Training
- Embracing Diversity at Workplace – MDT Training

Achievements

- Achieved **Top 5 overall in GeoComply Olympia** for applying AI to enhance design workflows and product efficiency.
- Led a **CEO-priority project** from concept to delivery, contributing to the **successful renewal** and **expansion of a key enterprise client contract**.
- Built and scaled **Design Systems from 0→1** at GeoComply, improving consistency, usability, and development efficiency across 5+ products.

Working Experiences

Geocomply - Product Designer

12/2021 – 05/2026

GeoComply is a global cybersecurity and digital identity company that specializes in high-precision geolocation compliance and fraud prevention.

Led end-to-end product design for complex enterprise products, working closely with Product, Engineering, QA, and business stakeholders to frame problems, define workflows, align priorities, and deliver scalable solutions.

WatchTower - Real-Time Anti-Fraud Dashboard

- Led the end-to-end design of a real-time fraud analytics product, from ambiguous business needs and problem framing through workflows, information architecture, data visualization, prototyping, and delivery.
- Facilitated alignment across Product, Engineering, and business stakeholders to define scope, user needs, priorities, and success criteria.
- Designed investigation workflows and data-dense interfaces supporting monitoring and analysis of 3M+ fraud cases with near real-time insights.
- Translated complex fraud signals and operational data into clear decision-support experiences for fraud leadership and enterprise clients.
- Connected product decisions to business goals including executive visibility, client demonstrations, customer retention, and commercial expansion.
- **Impact**: Improved fraud visibility and reduced reliance on manual reporting, supporting enterprise demos, customer retention, and the successful renewal and expansion of a key B2B client contract.

Case Management System (CMS) - Fraud & Chargeback Operations

- Led product design for a complex case management platform covering fraud and chargeback investigation workflows.
- Structured ambiguous operational requirements into scalable information architecture, case workflows, tracking patterns, and investigation tools.
- Partnered closely with Product and Engineering to negotiate workflow complexity, technical constraints, and delivery priorities.
- Designed reusable patterns that supported high-volume operational workflows and more consistent case handling.
- **Impact**: Centralized fraud and chargeback operations for 100% of GeoComply clients, making it a core offering and a key product within the Fraud domain. The platform improved investigation efficiency, reduced processing friction, and created a more structured and scalable operational workflow.

IDComply - Identity Verification Platform

- Led end-to-end product design for a cross-platform identity verification experience across web and mobile.
- Simplified complex verification journeys involving identity documents, selfie capture, guidance, validation, and real-time feedback.
- Worked with PMs and engineers to define user flows, resolve edge cases, align platform behavior, and maintain a consistent experience across markets.
- Designed solutions supporting expansion into the US, UK, Poland, Brazil, and Mexico, adapting experiences to different market and compliance requirements.
- Used research, usability considerations, product data, and iterative design to identify and resolve major user friction points.
- **Impact**: Increased verification success rate by 50% and supported 20% user growth in the US, while enabling expansion into additional international markets.

Design System - Enterprise Design Foundation

- Led the design and strategy of a cross-platform design system, driving alignment across designers and engineers to define standards, components, patterns, and scalable foundations.
- Established reusable UI components, patterns, and guidelines to ensure consistent and efficient experiences across multiple products and platforms.
- **Impact**: Improved consistency and design/development efficiency across 5+ products, accelerating delivery and supporting scalable product development.

Iconic group - Design Lead

04/2018 – 11/2021

Iconic group is a Japanese HR consulting and international recruitment firm operating primarily in the ASEAN region.

Led design direction across digital products, websites, recruitment platforms, branding, and regional experiences. Managed and mentored a design team while collaborating with business and cross-functional stakeholders.

Iconicjob.vn – Recruitment Platform

- Led the redesign of the main recruitment platform, focusing on improving candidate journeys, information architecture, and recruitment workflows.
- Identified UX issues across complex recruitment flows and translated business requirements into clearer user experiences.
- Collaborated with stakeholders to prioritize improvements based on user needs and business objectives.
- **Impact**: Increased registrations by 3,000+ per month.

Startwith & Kensetsu Websites

- Led the logo, branding strategy, UX, and visual design for two new websites supporting expansion into new markets and services.
- Worked with stakeholders to translate business positioning and service requirements into scalable digital experiences.
- **Impact**: Supported market expansion, new services, and business growth Japan.

Regional Job Platforms

- Maintained and scaled recruitment platforms across 5 countries, ensuring consistent UX while adapting experiences to local market requirements.
- Established reusable patterns and design practices to improve consistency across regional products.
- **Impact**: served as the main recruitment platform for Japan, Malaysia, Indonesia, Singapore, supporting local hiring and business operations.

HR Consulting Website

- Designed and launched the main website for a high-end HR consulting service.
- **Impact**: contributed to becoming the #1 Japan-focused HR consulting service in Vietnam.

Team Management

- Managed and mentored 2 direct-report designers.
- Provided structured feedback on UX, UI quality, design process, and communication.
- Supported designers in improving craft quality and creating more consistent design outcomes across projects.

Nhat Cuong Software - UI/UX Designer

08/2017 – 04/2018

Nhat Cuong Software was a Vietnamese IT company that specialized in developing core e-governance systems and public service software for the Hanoi city government.

Contributed to the design of ERP systems by creating core workflows and features that support complex internal operations, improving efficiency and user experience.

- Collaborated with the team to design core workflows and key features for the Nhật Cường ERP system, supporting complex business operations and internal processes.
- Designed major features for the Nhật Cường Mobile ERP application, improving usability and efficiency for daily operational workflows.
- Worked on outsourced web projects with cross-functional teams, delivering responsive and user-centered solutions aligned with client requirements and technical constraints.
- **Impact: C**ontributed to core ERP features adopted across multiple large-scale systems, including Nhật Cường ERP, Quân Khu 7 ERP, and Hà Nội City ERP, supporting complex government and enterprise operations.
